MSc in Cybersecurity Engineering | Polytechnic of Turin, Turin (TO), Italy 2026 -- Present

- **Twin Track Master Program:** integrated 3-year path to obtain a double Master's Degree (LM-66 in Cybersecurity Engineering and LM-32 in Computer Engineering).
- **Relevant Courses:** Hardware & Wireless Security, Cloud Computing Technologies, Information Systems Security, AI & Cybersecurity, Distributed System Programming, Security Verification & Testing.

BSc in Computer Engineering | University of Salerno, Fisciano (SA), Italy 2022 -- 2025

GPA: 3.59/4.0 - Final Mark: 107/110

- **Relevant Courses:** Computer Programming & Architecture, Signal Analysis, Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Web Technologies, Databases, Mobile Programming, Advanced Java Programming, Operating Systems.

PROJECTS

Oracle Discord Bot | Javascript/Node.js, React, SQLite Ongoing

Oracle is a comprehensive Discord application engineered to centralize server management and eliminate the need for redundant, single-purpose bots.

- Developed a robust backend using Node.js and the Discord.js library to handle continuous audio streaming, interactive utility commands, and seamless community engagement.
- Designed and deployed a dedicated React-based web dashboard, offering users an intuitive graphical interface for streamlined bot configuration and server monitoring.

DriveAssistant | Flutter, Python, Docker, MongoDB

DriveAssistant is a cross-platform voice assistant application designed to ensure driver safety by integrating natural language processing and intelligent document analysis.

- Designed a mobile frontend using Flutter and the Google Navigation SDK to automate route planning based on destinations extracted from delivery notes.
- Integrated a containerized microservices infrastructure using Docker Compose and MongoDB to manage document validation and seamless real-time communication.

Wordageddon | Java, JavaFX, SQLite

Wordageddon is an educational desktop application designed to enhance user memory and reading comprehension through timed textual analysis and dynamic interactive quizzes.

- Engineered a complete object-oriented desktop application using Java and the JavaFX framework, implementing CSS3 for custom UI styling and seamless user authentication.
- Developed an automated text-processing algorithm that analyzes document word frequency in real-time to dynamically generate multiple-choice memory quizzes across varying difficulty levels.
- Integrated a persistent local storage architecture utilizing SQLite to securely manage user profiles, compile post-game leaderboard statistics, and enable the seamless recovery of interrupted sessions.

EXPERIENCE

Software Engineering Intern | MinervaS 09/2025 -- 12/2025

During my curricular internship at MinervaS, I led the frontend development of DriveAssistant, a cross-platform mobile application designed to provide drivers with a safe, voice-activated intelligent interface.

- Engineered a responsive and highly intuitive mobile user interface utilizing the Flutter framework, ensuring seamless cross-platform performance across both Android and iOS devices.
- Architected the integration layer between the mobile client and a dockerized Python microservices backend, handling real-time asynchronous communication for advanced OCR and Voice AI services.

SKILLS

- **Programming:** Java (OOP), JavaScript, Dart, C, Matlab, HTML5, CSS3, SQL, Bash, Verilog
- **Frameworks & Libraries:** Flutter, React, Node.js, Express.js, Bootstrap, TailwindCSS, JavaFX, Discord.js, JUnit
- **Tools & Infrastructure:** Proxmox, Docker, Git, GNU/Linux, Wireshark, Aircrack-ng, PostgreSQL, SQLite, MongoDB, Doxygen, Javadoc
- **Languages:** Italian (Native), English (Cambridge B2)
